

I believe that XM Radio should be allowed to provide such services which are in question. I personally have stopped listening to regular radio since I obtained XM radio. They provide everything I need. XM instant traffic and weather was the greatest thing. I enjoy constant information regarding my weather and traffic without having to wait for the specific times like a regular radio station. I pay for cable in order to obtain services that regular TV does not offer. Now I also pay for XM Radio to obtain a unique variety of music and services that no regular radio station can offer. I urge the FCC with all my respect to reject the NAB's petition 04-160 and to ensure the support to XM's ability to provide the services and programing that I deserve and expect from them.
